SUMMARY

Computer science graduate and M.S. student specializing in applied machine learning and robotics. Built ML models that optimized 3D-printing quality and speed (MassURC presenter, Sloan Fellow), trained LSTM time-series predictors, and built custom YOLOv5 datasets for emotion recognition on a humanoid robot at Seoul National University. Seeking ML and AI engineering roles.

EDUCATION

University of Massachusetts Boston — M.S. in Computer Science *Expected May 2027*

University of Massachusetts Boston — B.A. in Computer Science *December 2025*

UMass Global (with Springboard) — Software Engineering Bootcamp *October 2024*

Azure College — Associate in nursing *August 2022*

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, C++, C, SQL, HTML, CSS
ML & Research: TensorFlow/Keras, PyTorch, scikit-learn, pandas, NumPy, YOLOv5, computer vision, LSTM, time-series modeling, NSGA-II, genetic algorithms
Frameworks: React, Node.js, Express, Flask, Angular
Cloud & Deployment: AWS (Lambda, EC2, S3), Azure; deployed an ML model pipeline, a website, and a mobile app
Tools: Git, Jira, Postman, MongoDB

RESEARCH & PROJECTS

Machine Learning & AI Robotics Program *Summer 2024*
Seoul National University — Seoul, South Korea

- Built custom datasets and used YOLOv5 to program emotion-recognition behavior in a humanoid robot (Python).
- Improved classification accuracy through iterative tuning and testing of the recognition model.
- Collaborated with an international cohort of 20+ engineers to design, test, and refine human-robot interaction features.

3D Printing Optimization Research *Fall 2024 – Spring 2025*
University of Massachusetts Boston — Undergraduate Researcher | Sloan Fellow (2024) | MassURC Presenter

- Researched how ML can improve the reliability, quality, and speed of 3D printing; selected as a Sloan Fellow.
- Reduced print time by up to 25% while maintaining target quality metrics, using NSGA-II multi-objective optimization to balance time against quality.
- Predicted surface finish, tensile strength, and failure rates with ML models trained on 1,000+ PLA print samples.
- Analyzed 500+ parameter combinations with genetic algorithms to improve print reliability.
- Developed an API prototype that lets users generate optimized print settings automatically.

Waveform Prediction LSTM Model *Summer 2024*
Break Through Tech AI — Machine Learning Project

- Reduced prediction error by 18% by training LSTM models to predict waveform behavior.
- Engineered time-series datasets from 10k+ waveform samples for model training.

PROFESSIONAL EXPERIENCE

Program Manager — Global Programs, University of Massachusetts Boston *2023 – Present*

- Coordinate planning and execution of student-facing, international, and academic programs involving students, faculty, university departments, and external partners.
- Manage timelines, schedules, logistics, communications, orientations, events, and space coordination to support successful program delivery.
- Serve as point of contact for students, faculty, staff, and partners; resolve concerns and follow up with stakeholders to keep initiatives on schedule.
- Develop program documentation, tracking systems, and workflows; support participant onboarding across diverse cultural backgrounds.

Patient Care Assistant(PCA) — Brigham and Women's Hospital *2022 –2023*

- Provided direct patient care during a 1-year period, assisting nursing teams with daily patient needs, safety, and comfort.

LANGUAGES & INTERESTS

Languages: English, French, Haitian Creole (fluent); Korean, Spanish, German, Chinese (advanced)
Interests: AI systems, robotics, cloud engineering, product innovation, Program/Product Management
